

Security Check: Consent and Scope Agreement

Business name:

Domain(s) to be checked:

Contact person and role:

Date:

What we will do

We will check your public website and email setup from the internet. We will look at open ports, website security settings, and email protection records. We will make a plain connection test to a short list of common ports. We will also request a few common file addresses, such as `/.env`, only to see whether they can be read by anyone. We will not store the contents of any file we can read. We will also search for domain names that look like yours.

What we will not do

We will not log in to any of your systems. We will not try to guess passwords. We will not try to slow down or break your services. We will not access customer data. We will only check the domains listed above.

What we will store

We will store the scan results for your domains and the report. We will not store passwords, customer data, or personal information.

How long we keep it

We will delete your results 90 days after the final report. You can ask us to delete them sooner.

Who sees the results

You will see them. Project reviewers may see them with your business name removed. We will not name your business in public without your written permission.

Your rights

You can stop the check at any time. You can ask for a copy of your results. You can ask for them to be deleted.

Limits

This is not a full penetration test. It can miss problems. It does not guarantee your business is safe.

Authority

I confirm that I own these domains or have the authority to approve checks on them.
